The most visited poker software is usually the one with a good quality material in it. Poker software is more than just the poker odds calculator software. The poker software should offer real time game analysis, statistics, and other related information that depicts the true disposition of the player in the table. The poker software can be the copyrighted product that is designed and owned by the site or it can be that, which has been licensed for use from a third party site.

Award winning tracking poker software is making a record breaking figure in terms of number of downloads and number of sales too. This is because the need for trackers is becoming increasingly in demand for players to analyze their playing skills. Poker software that offers session tracking along with a comprehensive custom chart and detailed analysis is available as free poker software that is easily downloadable from the internet. Before making a purchase or download of poker software it will be best to compare the software offering the same kind of material and usage in the other sites. Some of the poker software programs that are embedded in the poker calculators tend to be robots and bots. There is a wide restriction for the usage of such bots in money plays. And one will have to make sure that the kind of software that they are employing for playing is not robots. If the site is going to figure out that a player is making the plays and winning with robots, the consequences can be a lot of penalty with retaining of pay outs from getting released to the account any further. The poker software is not only those that help to play the game, the programs that help to maintain the database of the traffic that comes in to the poker site for playing is also listed under the poker software heading. With the growing number of traffic to poker sites, there will be a need to update the site with a poker software database that will support to store the many thousands of player information in it. An ordinary database server program is going to provide with the information storage space for just 100 to 500 players, but comprehensive and custom designed database server poker software can support more than 100,000 data based on the structure of the program. Summing up, poker software is an ocean in itself.
